SKIN CLASSIC

BEFORE & AFTERCARE

The Skin Classic is an award-winning laser alternative treatment for common skin irregularities such as broken capillaries, cherry angiomas (red spots), hyperpigmentation (brown spots), milia (white bumps), sebaceous hyperplasia, and acne. The Skin Classic utilizes a lamprobe to superficially dehydrate the skin irregularity with little downtime and no damage to surrounding tissue. The Skin Classic is non-invasive and is intended for use on superficial epidermal imperfections only.

CONTRAINDICATIONS

If any of the following conditions pertain to you, Skin Classic treatment is not appropriate for you:

- Any dermatological disorders in the area being treated (including itching, bleeding, dermatitis, etc).
- Pacemaker
- Pregnancy/Nursing
- Lupus
- Accutane users...even after 6 months post meds (PCP note required)
- Any history of melasma in treatment area
- Moles (should only be treated by a medical professional)

BEFORE YOUR TREATMENT

- Please arrive without makeup on the day of your appointment.
- Numbing can be applied as needed (will add 10-15 min to your service)

AFTERCARE & HEALING

- 24-48 hours after, a scab-like crust will form over the area. This will fall off on its own in 7-14 days. Complete healing may take 30 days or longer.
- In some cases, swelling, bruising, redness and some crusting may occur.
- Do not pick at the crusting. Prematurely removing the crust may cause hyperpigmentation or scarring.

- If the area is still irritated by the end of the day, a clean baggie of frozen peas works well 10 minutes on and 10 minutes off. Moisturize after with gentle moisturizer.
- Wash with a gentle cleanser and use only your fingertips.
- Pat dry instead of rubbing to prevent removal of crust.
- Do not get the treated area(s) wet (showers are fine, but do not soak the treated area)
- Mineral makeup may be worn over moisturizing sun block after 24 hours.
- Moisturizing sun block must be used every day whether it is rainy or snowy to avoid hyperpigmentation during healing.
- Avoid direct sunlight immediately follow treatment.
- The skin may look pinkish or brownish for up to 6-8 weeks as the new skin goes through the complete healing cycle. Be patient with the healing process.
- Do not use any other form of peeling or bleaching products for 21 days.
- Do not use harsh or anti-aging products while the area is crusted and sloughed off.
- No procedures in or around the treated area for 30 days

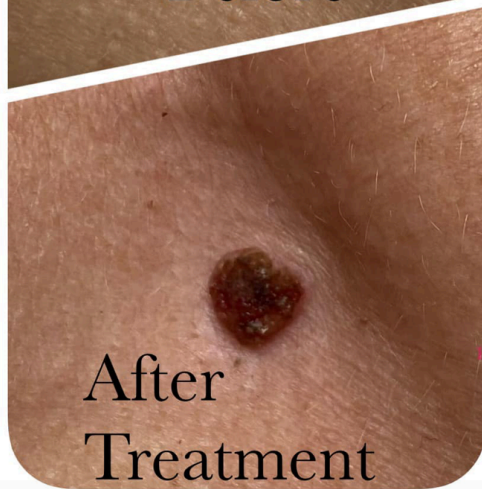

Reminder that outcomes for skin irregularity treatment can never be guaranteed. Every skin heals on different timelines and can have different responsiveness to treatment. Some imperfections may require more than one treatment.

Cherry Angiomas During Healing

Sebaceous Hyperplasia Before and After

PIC•COLLAGE

Seborrheic Keratosis

Broken Capillaries Before and After

Occasionally it may take longer than a skin cycle to completely heal.

Thank you so much for choosing Pure Skin Permanent Cosmetics!

Did you know the best way you can support women-owned small businesses is to share your experience with others in a review? If you have a moment, drop us a quick review! Thank you so much!
